

Interception API Commercial License

This is the appropriate license if you are creating **proprietary applications** and do not want to distribute and share the source code of your application under the GNU GPL license.

The *Interception API* commercial license actually is the **GNU Lesser GPL** version 3 license with the following exceptions:

- You may link, **statically or dynamically**, your application with the *Interception API*, and you may distribute the resulting combined work under terms of your choice, without any of the additional requirements listed in clause 6 of the GNU Lesser General Public License;
- You must **purchase a Lifetime License**;
- You may **NOT** relicense the code to anyone.

This license does not require your application to be GPL-compatible (ie: you are NOT forced to release your source code under the GNU (L)GPL v3 license), nor to touch anything to your application or your license: you may link your proprietary application against *Interception API* without sharing your source code.

Commercial licenses:

- Are **royalty-free**;
- Remove any obligations to release your source code under the GNU GPL; however, any change made to the *Interception API* codebase should be published and brought back to the community (as with the GNU Lesser GPL license);

The **Lifetime License**:

- Is **perpetual** and include all public upgrades that are released after the date of purchase during **one year**.
- **Perpetuity** applies only for the releases of that **one year** period.
- Provide perpetual copyrights for the *Interception API* supporting binary files (drivers, installers, dynamic libraries, etc) delivered on that **one year** period, once they are used in conjunction with the *Interception API*.

There is still no warranty on the project, and it does not include or guarantee any support.
